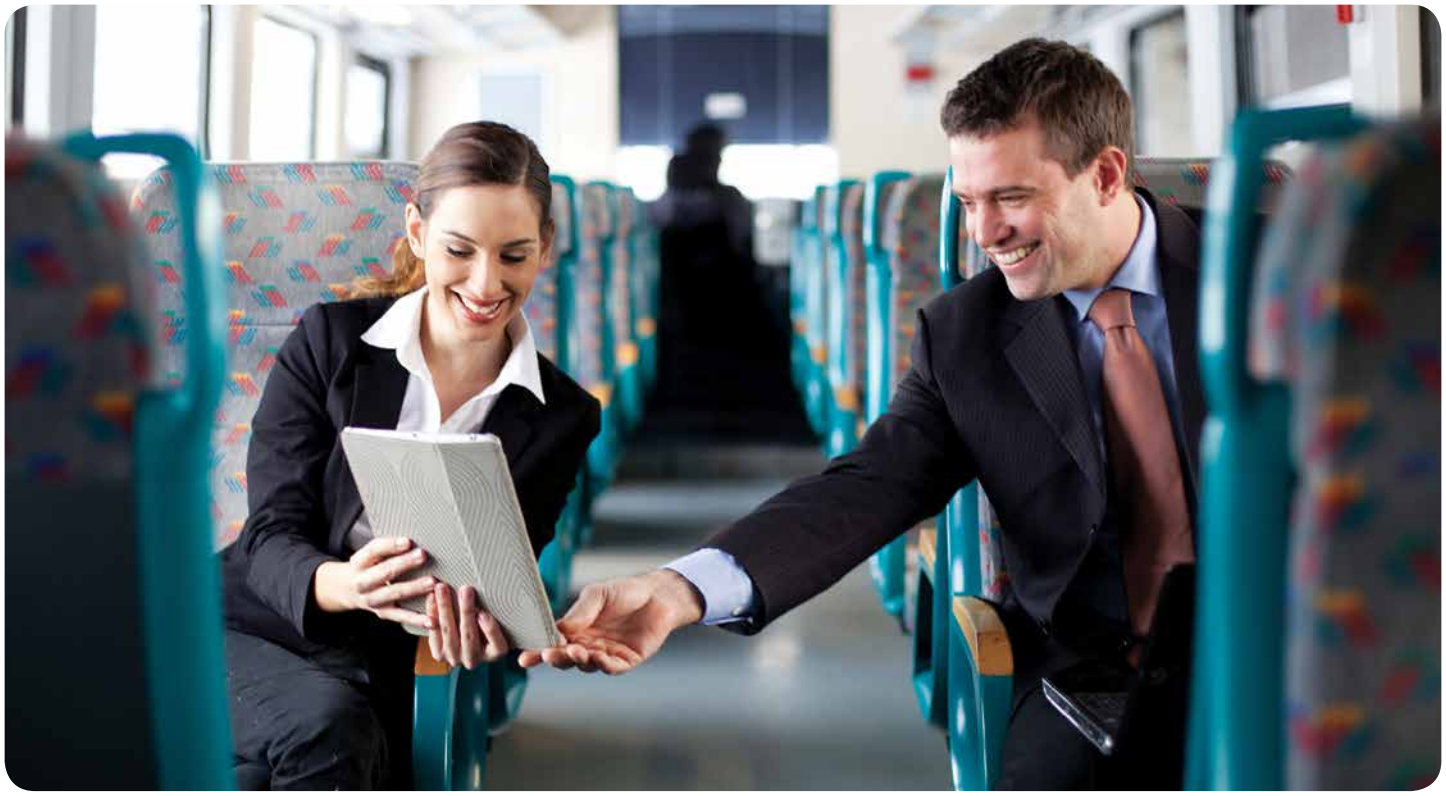
Keep moving. Stay ahead.

True mobility at work begins with the
Fuji Xerox Mobile Print for Business application.

FUJI Xerox



The freedom of working on the move

For many people, being mobile is an essential part of their working day. There's simply no substitute for personal interaction with clients and colleagues, wherever they are.

That used to create challenges for staying in touch, handling information and preparing documents. Being tied to the office to find, share and print documents made working on the move a time consuming — and often frustrating — experience.

That's all changed

Mobile devices now provide an unprecedented ability to contact colleagues, share information, update new developments and build relationships. Mobile phones and tablets have become an essential work tool for busy people.

According to Mashable, 87 per cent of businesses now provide their employees with mobile devices and cover their costs[1], while over half of all workers are happy to use their own devices at work[1], creating a mobile Bring Your Own Device (BYOD) workforce. It's an unstoppable phenomenon.

In other words, many businesses are experiencing a new way of working. Their workers will use mobile technology as their primary means of collaboration, and will create, edit and share all kinds of documents on the go — saving time, saving resources and working more productively than ever before.

In fact, mobile devices will soon be touch points for most interactions between businesses, providing technology solutions for seamless flows of information and documents between workers. This is an opportunity to manage — and optimise —the new way to work.

Mobile Print for Business

Having easy access to documents, wherever you are, is vital for mobile workers. Fuji Xerox's new Mobile Print for Business is an application for iOS, Android and Windows mobile phones and tablets, enabling you to print, scan, upload and share documents from your mobile device, without returning to the office.

Fuji Xerox Mobile Print for Business integrates easily with SharePoint, TRIM and DocuShare content management systems, to give you instant access to your documents.

The Fuji Xerox Mobile Print for Business application enables you to quickly print documents stored in your mobile device or in your content management system. You can also scan a document from an MFD into your mobile device, or upload a document stored in your mobile device to your content management system.

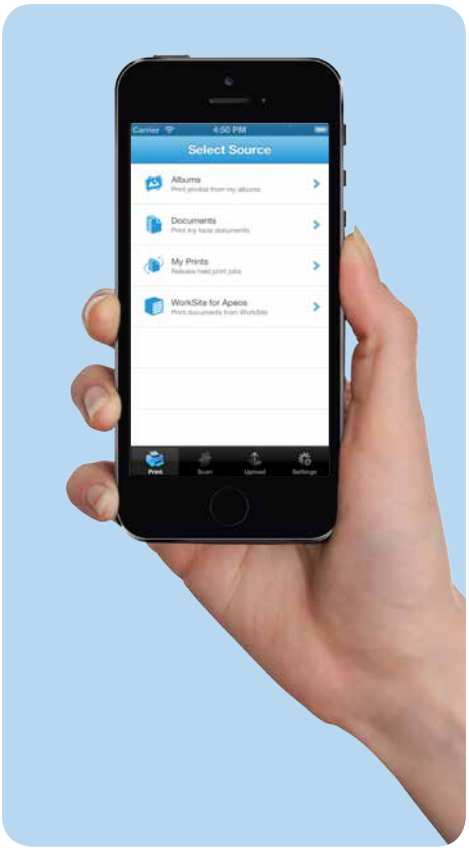
Wherever you are, you can access your documents to do business — your office is always in your pocket.

By scanning documents from a supported Fuji Xerox MFD to your mobile device, you have ready access to it anywhere. You can also upload documents on your mobile device to your company's content management system.

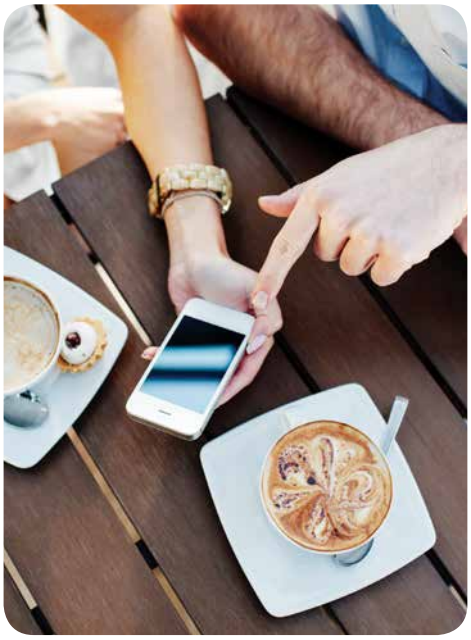
Using the latest mobile technology, Mobile Print for Business lets you use your mobile devices to handle documents via QR codes and Near Field Connection (NFC), so you can print and scan documents instantly.

An NFC supported device gives you the opportunity to simply wave your mobile device over a symbol on the MFD to print or scan a document. Or you can simply take a photo of a QR code on an MFD and your selected document/s will be printed to that device. That really is working on the go!

Print documents and images stored on your mobile device to virtually any printer or MFD.



Connect to your Content Management System to print documents or upload new documents.



Scan documents from a supported Fuji Xerox MFD to your mobile device.

Print

Mobile Print for Business lets you print:

- your mobile device's photos from albums
- from your mobile device's camera – take a photo and print it
- documents stored locally on your device
- documents stored in your Enterprise Content Management system.

Choose a wide range of print options to suit your needs, including:

- the number of copies.
- printing in colour or mono.
- two sided or single sided.

You can print documents in any one of three different ways:

- via a print queue
- via QR code on your supported Fuji Xerox MFD or printer
- via Near Field Communication (NFC) on your supported Fuji Xerox MFD or printer.

Scan

Mobile Print for Business lets you scan documents to your mobile device, so you have everything you need, every time, everywhere.

Document formats supported by Mobile Print for Business include PDF, PDF/A, Tiff/Single, Tiff/Multi, DocuWorks, JPEG, XPS.

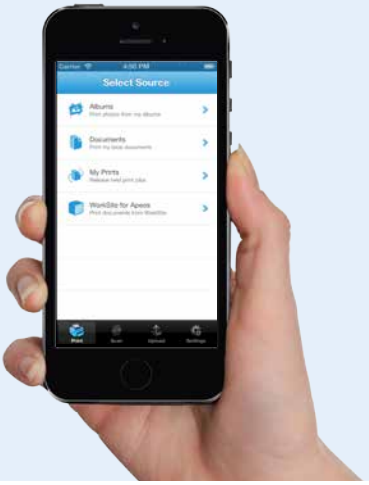
You can scan documents in two ways:

- via QR code on a sticker on your supported Fuji Xerox MFD or printer
- via NFC (Near Field Communication) with a sticker on your supported Fuji Xerox MFD or printer.

Upload

You can be sure you have everything you need for business by uploading documents to your corporate Enterprise Content Management system from your mobile device.

- Upload photos from your mobile device photo albums
- Take a picture on your mobile device and upload it
- Documents stored locally on your device can also be uploaded and shared when you wish.



Business on the move

Don't let old thinking slow you down at work. Take your office with you, wherever you go, on your mobile device. You're always prepared.

Keep moving. Stay on top with Fuji Xerox Mobile Print for Business.
